

Recycled Resin Packaging is now available.

Choose your Packaging.
Choose your Resin Mix.

Utilisation of Post-Consumer and Post-Industrial Recycled Resin is one way of contributing to reducing the negative impact of plastic packaging waste on our environment.

PB Packaging provides you with the opportunity to include a range of recycled resin mixes in your packaging without compromising on appearance or quality.

Helping you take a
step on your
sustainability journey.

Choosing rHDPE

Recycled High Density Polyethylene

Today's consumer demands sustainable solutions be incorporated into the products and brands they purchase.

PB Packaging is working to supply products made from sustainable resources. Recycled HDPE resin is made of post-consumer and industrial waste collected in Australia. Through the recycling of waste plastic we can reduce our carbon impact and our reliance on non-renewables.

rHDPE can be blended into a range of product packaging. rHDPE is available in both non-food contact and food contact approved quality. rHDPE does cost more than virgin resin due to the extensive cleaning processes required to capture recycled resin.

Indicative pricing impacts on rHDPE content.*

To discuss your sustainability journey and how we can help you achieve your goals through recycled resin options please contact your closest PB Packaging team.
